NCRP Projects: Education & Outreach

Education & Outreach - # of events	212 Events
Education & Outreach - types of participants	22 Types of Participants
Education & outreach - # of participants	7322 Participants

Water Quality and Supply Project Benefit Summary

Water quality improved - # of projects	47 Projects
Water quality improved - sediment reduction	1663340.5 Tons
Water quality/sediment reduction - Mi of Roads treated	130.64 Miles
Water supply improved - # of projects	53 Projects
Water supply - infrastructure improvements	6053.46 Acre Feet
Water supply improved - estimated increased instream flow (cfs)	1.43 CFS
Water supply improved - estimated increased instream flow (acre-feet)	32937.96 Acre Feet
Water supply improved - households impacted	82500 Households

The North Coast Resource Partnership collaborates with an array of partners to enhance the communities and watersheds of the North Coast region. NCRP uses the best available science, data, and local expertise to prioritize projects for implementation, capacity enhancement investments, and technical assistance in the region. Projects are prioritized by the NCRP through an equitable, transparent, and rigorous process that evaluates projects based on their contribution to NCRP goals and objectives. The NCRP has a long history of documenting project performance and using the NCRP Project Tracker platform, where the NCRP documents information about funded project status, location, size, goals and objectives, impact, and performance metrics. The charts and tables in this poster provide a current snapshot of some of the tangible benefits of these projects to the natural and human communities in the North Coast Region.
